What is Ativan Used for?

Ativan is a fast-acting sedative that is primarily used to treat:

1. Anxiety Disorders: Generalized anxiety, social anxiety, and panic disorders
2. Insomnia: Difficulty falling asleep or staying asleep
3. Status Epilepticus: Severe, life-threatening seizures

Ativan works by enhancing the effects of gamma-aminobutyric acid (GABA), a neurotransmitter that calms brain activity. This results in a sense of relaxation, reduced anxiety, and improved sleep quality.
